Bridged product overview

What we do

Bridged is an AI engagement layer for digital publishers. It turns every article into an interactive experience readers actually use, and turns that engagement into first-party data and new ad inventory.

Capabilities

• AI-generated interactive formats (quizzes, polls, explainers and "ask this article" Q&A) created automatically from each story
• Smart next-read journeys that keep readers moving through the site instead of bouncing
• Zero-party data capture: readers answer a question and become a known, consented profile
• Sponsored interactive units that sell at premium CPMs because sponsors get measurable engagement
• One script tag, no engineering sprint, and it works with your existing CMS and ad stack
• Editorial controls: every generated format can be reviewed, edited or switched off per section

Value

• More pages per session and longer time on site
• More newsletter sign-ups and registrations without hard walls
• New premium ad inventory that is not dependent on third-party cookies
• First-party audience data your sales team can package for advertisers

Approved claims

• Bridged works with the existing CMS and ad stack; no migration needed
• A pilot can go live on one section in about two weeks
• Formats load after the article content and do not block the page

Do not say

• Never promise a specific revenue uplift for a prospect without citing a named case study
• Don't call Bridged a chatbot

- Never claim we replace the editorial team
- Avoid hype words like revolutionary, game-changing or disruptive
